X-Ways Software Technology AG

Training Confirmation

for

Troy Hokanson

This certificate confirms successful completion of our 4-day computer forensics course "X-Ways Forensics" held in Chicago, IL, from 30 Apr 2018 to 3 May 2018 (8 hours per day).

As a maker of computer forensics software, in our training course "X-Ways Forensics" we focus on conveying the proper and efficient usage of our main product X-Ways Forensics, and to a lesser degree of WinHex and X-Ways Investigator, for application in environments of forensic IT (electronic evidence acquisition and examination, data recovery, IT security). We also teach data storage concepts, methods of data hiding, file system and file metadata, how to analyze various forensically relevant file types (Windows Registry hives, Internet browser histories, NTFS logs, Windows shortcuts, and many more) and explain the theoretical background of functionality like file recovery, file header signature identification, hash databases, slack space extraction, physical disk image creation, keyword searches, etc., and attendees of this course practically apply this functionality to sample data right away.
